

AHMED SAMI FATHI

+20 115 288 7590 | ahmedssami@gmail.com | Mansoura, Egypt | [LinkedIn](#) | [Github](#)

4th-year Computer Science student at Sinai University specializing in Data Engineering, with hands-on experience building ETL/ELT pipelines and data warehouses using Python, SQL, Apache Spark, dbt, and Snowflake. Exposed to cloud platforms including AWS, Databricks, and Microsoft Azure. Seeking a Junior Data Engineer / Analytics Engineer role to build production-ready data infrastructure.

EDUCATION

Bachelor of Computer Science – Data Engineering Track

Sinai University | 2023 – 2027

CGPA: 3.3/4.0 – Very Good

EXPERIENCE & TRAINING

Digital Egypt Pioneers Initiative (DEPI) – Egypt

Jul 2026 – Present

Microsoft Data Engineer Trainee

- Designed scalable data architectures to support analytics and AI-driven solutions.
- Engineered data pipelines using Python and Microsoft Azure for cloud-based data processing.
- Managed databases and optimized data workflows to support reliable pipeline performance.
- Delivered an end-to-end capstone project integrating cloud and SQL technologies into a complete data pipeline.

National Telecommunication Institute (NTI) – Egypt

Aug 2026 – Present

Big Data Analysis Intern

- Administered Linux-based environments and Hadoop clusters using YARN and Zookeeper.
- Processed and analyzed large-scale datasets using MapReduce, Apache Spark, and Flink for batch and stream processing.
- Engineered data ingestion pipelines and real-time streaming architectures using Apache Kafka and Flume.
- Utilized Apache Hive for data warehousing and complex querying across distributed storage systems.

PROJECTS

Airbnb Analytics Pipeline | AWS S3 • Snowflake • dbt Core • SQL • ELT • Data Modeling

- Engineered an ELT pipeline using AWS S3 and a Snowflake External Stage to ingest and stage raw Airbnb datasets.
- Built Bronze, Silver, and Gold transformation layers with dbt Core, using incremental models and source()/ref() for dependency-aware lineage.
- Designed a Star Schema (fct_bookings, dim_hosts, dim_listings) and an analytics-ready One Big Table, applying dbt snapshots to track historical changes and dbt build/compile for validation.

Retail Analytics Data Pipeline | Databricks • dbt • SQL • Git

- Architected a Bronze/Silver/Gold medallion pipeline using dbt on Databricks, incorporating data cleaning and validation with null handling, formatting, and type casting.
- Built modular dbt transformation models with reusable macros to standardize KPI logic across daily and monthly sales marts.
- Delivered Gold-layer business KPIs, including net revenue, revenue after returns, promotion attach rate, return rate, and average transaction value.

TECHNICAL SKILLS

- | | | |
|------------------------|----------------------------------|-------------------------|
| • Python & SQL | • AWS S3, Snowflake & Databricks | • Hadoop & Apache Spark |
| • PostgreSQL & MongoDB | • Microsoft Azure & Cloud | • Kafka, Flink & Hive |
| • Pandas & NumPy | • ETL / ELT Pipelines | • MapReduce & YARN |
| • Linux, Git & GitHub | • dbt & Apache Airflow | • C++, HTML & CSS |

SOFT SKILLS

- | | |
|----------------------|---------------------------|
| • Problem Solving | • Analytical Thinking |
| • Team Collaboration | • Effective Communication |

LANGUAGES

- English:** Professional Working Proficiency
- Arabic:** Fluent (native language)
